Fast and easy way to test responsive design side-by-side.

"Lorem Ipsum" generator

"Lorem ipsum" dummy text is used by many web-developers to test how their HTML templates will look with real data. Often, developers use third-party services to generate "Lorem ipsum" text, but now you can do that right in your editor. Just expand `lorem` or `lipsum` abbreviations to get the following snippet:

```
Lorem ipsum dolor sit amet, consectetur adipisicing elit. Eligendi non quis
exercitationem culpa nesciunt nihil aut nostrum explicabo reprehenderit optio
amet ab temporibus asperiores quasi cupiditate. Voluptatum ducimus voluptates
voluptas?
```

`lorem` is not just a normal snippet—it's actually a *generator*. Every time you expand it, it will generate a 30-words dummy text, splitted into a few sentences.

You can specify how many words should be generated right in the abbreviation. For example, `lorem100` will generate a 100-words dummy text.

Repeated "Lorem ipsum"

You can use `lorem` generator inside repeated elements to create tags filled with completely random sentences. For example, p*4>lorem abbreviation would generate something like this:

```
<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit. Qui dicta minus
molestiae vel beatae natus eveniet ratione temporibus aperiam harum alias
officiis assumenda officia quibusdam deleniti eos cupiditate dolore
doloribus!</p>
<p>Ad dolore dignissimos asperiores dicta facere optio quod commodi nam
tempore recusandae. Rerum sed nulla eum vero expedita ex delectus voluptates
rem at neque quos facere sequi unde optio aliquam!</p>
<p>Tenetur quod quidem in voluptatem corporis dolorum dicta sit pariatur
porro quaerat autem ipsam odit quam beatae tempora quibusdam illum! Modi
```

```
velit odio nam nulla unde amet odit pariatur at!</p>
<p>Consequatur rerum amet fuga expedita sunt et tempora saepe? Iusto nihil
explicabo perferendis quos provident delectus ducimus necessitatibus
reiciendis optio tempora unde earum doloremque commodi laudantium ad nulla
vel odio?</p>
```

Also, `lorem` generator utilizes the implicit tag name resolver when `lorem` element is self-repeated so you can shorten your abbreviations:

`ul.generic-list>lorem10.item*4`

...will produce

```
<ul class="generic-list">
    <li class="item">Lorem ipsum dolor sit amet, consectetur adipisicing
elit. Nam vero.</li>
    <li class="item">Laboriosam quaerat sapiente minima nam minus similique
illum architecto et!</li>
    <li class="item">Incidunt vitae quae facere ducimus nostrum aliquid
dolorum veritatis dicta!</li>
    <li class="item">Tenetur laborum quod cum excepturi recusandae porro sint
quas soluta!</li>
</ul>
```
